Machine Translated by Google

RICO ENTERPRISE CRITICIZED FOR COVID COVER-UP.
A COMPLETE CONSPIRACY AGAINST COVID IS EVIDENT IN A DEMAND
LEGAL PRINTED BY DR. LEONARD G. HOROWITZ FOR ADMINISTRATIVE OFFICERS
FEDERAL OFFICERS ADOPT CORRECTIVE MEASURES.

May 18, 2025.
https://medicalveritas.org

Medical Veritas, Las Vegas (May 15, 2025).
Dr. Leonard G. Horowitz, a Harvard-trained emerging disease expert and Editor-in-Chief of Medical Veritas International Inc., has issued a formal legal “Notice and Demand” to U.S. Secretary of Health and Human Services (HHS) Robert F. Kennedy Jr., National Institutes of Health (NIH) Director Jay Bhattacharya, and U.S. Attorney General Pam Bondi. The notice details a widespread conspiracy and cover-up of the laboratory origins of COVID-19 and the root causes of COVID illnesses and deaths, implicating a “COVID Virus Vaccine RICO Enterprise” (CVVRE) involving

key figures and institutions, including Harvard University, Moderna, Pfizer, and federal agencies such as the FBI and CIA.

1. The Central Complaint of Dr. Leonard G. Horowitz:

Dr. Leonard G. Horowitz, a leading expert on emerging diseases and editor-in-chief of Medical Veritas International Inc., has filed a formal legal complaint against key figures and institutions related to the laboratory origin of COVID-19 and the harm caused by messenger RNA vaccines. According to Horowitz, these vaccines contain advanced technologies, such as graphene and nano-bioelectronics, that have been hidden from the public under an elaborate cover-up orchestrated by a "COVID Virus and Vaccine RICO Enterprise" (CVVRE). Here are the key points:

A. Cover-up of the Laboratory Origin of COVID-19:

Gain of Function: The SARS-CoV-2 virus was developed using "gain of function" techniques in laboratories in the U.S. and China, specifically at the University of North Carolina.
(UNC) under the direction of Ralph Baric and in collaboration with Peter Daszak of EcoHealth Alliance.

Falsification of Evidence: The FBI falsified evidence against Charles Lieber, former head of the Department
Harvard Chemistry professor, to divert attention from the cover-up of the virus's laboratory origin.

B. Vaccine Delivery Technology and Graphene:

Lipid Hydrogel: Messenger RNA vaccines use a lipid hydrogel-based delivery system containing graphene, a toxic material that can cause neurological and myopathic damage.

Fraud by Omission: Health authorities and manufacturers have denied the presence of
graphene in vaccines, arguing that it is not part of the final product. However, graphene is critical to the delivery device's functionality.

C. Crimes Against Humanity:

Depopulation Agenda: The harm caused by vaccines is aligned with globalist depopulation agendas promoted by figures like Bill Gates and the World Economic Forum (WEF).

Machine Translated by Google

Cover-up of Adverse Effects: Authorities have hidden the adverse effects of the vaccines, including myocarditis, pericarditis, blood clots and neurological disorders.

What does "COVID Virus and Vaccine RICO Enterprise" (CVVRE) mean?

The term CVVRE refers to an alleged Racketeer Influenced and Corrupt Organizations Act (RICO) organized criminal organization or network involved in the development, distribution, and cover-up of the SARS-CoV-2 virus and COVID-19 vaccines. According to Dr. Horowitz's allegations, this "enterprise" is comprised of key figures and institutions that collaborated to:

Developing the virus as a biological weapon:

Using "gain-of-function" techniques, the virus was manipulated genetically to increase their ability to cause immunological and pathological damage.

This includes the integration of HIV genetic sequences into SARS-CoV-2, which explains its ability to induce immunosuppression and severe disease.

Distributing toxic vaccines:

The vaccines would contain advanced technologies, such as graphene and nano-bioelectronics, designed not only to deliver messenger RNA, but also to act as bioelectronic control devices or even as hidden chemical weapons.

These vaccines would have been promoted under the guise of emergency health measures, but without solid evidence of long-term safety.

Covering up evidence and responsibilities:

The CVVRE allegedly used government institutions (such as the FBI, CIA, and NIH) and media outlets to conceal critical information about the origin of the virus, the toxicity of the vaccines, and reported adverse effects.

Examples include the cover-up of the role of Charles Lieber and other key researchers, as well as the censorship of independent studies that contradicted the official narrative.

AUDIOESPAI
iVOOX audioKiosco

Why is the term CVVRE relevant?

The use of the term CVVRE underlines that these actions would not be mere errors or negligence, but part of a coordinated and deliberate scheme. According to Dr. Horowitz, this scheme would be aligned with globalist agendas promoted by figures such as Bill Gates and the World Economic Forum (WEF), whose objectives include the implementation of social control technologies and population reduction.

This legal framework (RICO) allows the actions of CVVRE to be addressed as organized crimes, which implies responsibility not only for the individuals directly involved, but also for the institutions that facilitated or covered up these activities.

2. The Case of Charles Lieber and the Role of Graphene:

Charles Lieber, former head of Harvard's Department of Chemistry and a prominent nanoscientist, known for his work on nanomaterials and bioelectronic devices. His research has been funded by multiple sources, including government agencies such as DARPA and the National Institutes of Health (NIH), as well as private investors linked to companies such as Moderna, was

Machine Translated by Google

charged by the FBI with fraud related to Chinese financing. However, according to Horowitz, this accusation was fabricated to divert attention from his work in nanotechnology and graphene, which
It was used in messenger RNA vaccines as part of the bioelectronic delivery system.

A. Development of Nanobioelectronics:

Lieber developed advanced technologies using graphene, a highly efficient conductive material that can interact with biological tissues. These technologies were integrated into the "lipid hydrogel" used in vaccines.

Graphene enables the creation of neural interfaces capable of capturing and transmitting signals.
brain, which could be linked to military projects such as "Project Stargate."

B. Institutional Silencing:

Lieber's persecution reflects a pattern of institutional silencing. Independent investigators who have exposed similar wrongdoing have also faced resistance and
censorship.

Charles Lieber and his Connections to DARPA.

1. Charles Lieber: A Key Scientist in Nanotechnology:

Charles Lieber is a prominent nanoscientist at Harvard University, known for his work
in nanomaterials and bioelectronic devices. His research has been funded by multiple sources, including government agencies like DARPA and the NIH, as well as private investors linked to companies like Moderna.

Lieber has worked on the development of advanced technologies, such as lipid hydrogels and graphene, which are critical to the messenger RNA vaccine delivery system.

2. Lipid Hydrogel and Graphene:

Lipid Hydrogel: Messenger RNA vaccines use a lipid hydrogel-based delivery system containing graphene, a toxic material that can cause neurological and myopathic damage.

Fraud by Omission: Health authorities and manufacturers have denied the presence of
graphene in vaccines, arguing that it is not part of the final product. However, graphene is critical to the delivery device's functionality.

3. Connection with DARPA:

DARPA Funding: DARPA has funded projects related to nanotechnology and bioelectronics for years. According to public documents, Lieber received DARPA funding to develop devices capable of interacting with human tissue, which could have been used for military and mass surveillance applications.

Stargate Project: This project, mentioned in Horowitz's complaint, was intended to
develop brain data mining technologies using graphene and other advanced materials. Lieber and his collaborators, including researchers from MIT and Moderna, were involved in this program.

Machine Translated by Google

4. Collaboration with Moderna:

Moderna and DARPA: Moderna, one of the leading companies behind mRNA vaccines, has direct ties to DARPA. The company received initial funding from DARPA to develop mRNA delivery technologies using lipid hydrogels and graphene.

Robert Langer and Timothy Alan Springer: These scientists, associated with Moderna, collaborated with Lieber on key research in nanobioelectronics. Their work was funded by DARPA and other government agencies.

5. Institutional Silencing:

FBI Cover-Up: According to Horowitz, the FBI falsified evidence against Lieber to divert attention from his role in developing advanced technologies used in vaccines. This cover-up allowed those responsible for the harm caused by these technologies to go unpunished.

China Connection: Lieber also received funding from the Chinese government, suggesting a possible collaboration between the US and China in the development of advanced bioelectronic technologies.

Implications of Lieber's Connections to DARPA:

Charles Lieber's connections to DARPA and Moderna underscore the potential weaponization of advanced technologies used in mRNA vaccines. This raises serious concerns about:

Human Experimentation: Vaccines may be used as vehicles to introduce bioelectronic technologies into the human body for the purposes of social control or mass surveillance.

Globalist Agendas: The technologies developed by Lieber and his collaborators could be aligned with globalist agendas promoted by figures such as Bill Gates and the World Economic Forum (WEF), which seek to implement social control and population reduction programs.

3. Karen Kingston's Revelations on Delivery Technology:

Karen Kingston, a former Pfizer executive with experience in pharmaceutical research and development, has been one of the most vocal critics of the undeclared composition of COVID-19 vaccines. According to her, these vaccines contain synthetic components unrelated to traditional biology.

He pointed out that the term "lipid nanoparticles" used to describe the vaccine delivery system is misleading. In reality, these structures contain synthetic derivatives such as polyethylene glycol (PEG), a potentially toxic compound that can trigger adverse immune responses.

A: The "Vaccine" Fraud

They Are Not Vaccines: Kingston says products marketed as "vaccines" do not comply with the scientific definition of a vaccine, since they do not contain real genetic material capable of inducing a natural immune response.

Presence of Graphene: Based on independent analysis, Kingston notes that these

Machine Translated by Google

Injections contain graphene and other nanomaterials designed to interact with human tissue. This is consistent with the findings of Dr. Pablo Campra and the La Quinta Columna team.

B: Manipulation of technical nomenclature:

Lipid nanoparticles are not entirely "lipid" (i.e., biological fat), but include graphene and other synthetic materials designed to interact with human tissue.
polyethylene glycol a derivative of polyethylene.
This finding is consistent with Horowitz's claims about the inclusion of graphene in the vaccine delivery system.

C: Connection to Biological Weapons:

Biological Weapons Project: Kingston describes the vaccines as part of a biological weapons project led by the U.S. Department of Defense, using graphene as a key component to weaken the human immune system.
Institutional Cover-Up: Kingston's accusations reinforce Dr. Horowitz on the role of government and corporate agencies in covering up the true purpose of these products.

4. Findings of Dr. Daniel Nagase:

Dr. Daniel Nagase, a Canadian electron microscopy expert, conducted detailed analyses of COVID-19 vaccine vials. His findings revealed the absence of biological elements such as DNA or RNA and the presence of graphene and heavy metals.

A. Absence of Biological Elements:

According to Dr. Nagase, the vaccines do not contain actual genetic material, but are designed to deliver "payloads" of graphene and other bioelectronic nanostructures.

B. Persecution and Reprisals:

After disclosing his results, Dr. Nagase faced persecution, reflecting a similar pattern. as described by Horowitz in his legal complaint.

5. Findings of Dr. Poornima Wagh and her international team of collaborators: Absence of Biological Elements.

Dr. Poornima Wagh led an international team that analyzed thousands of vials of vaccines against COVID-19. Their findings revealed the absence of essential biological elements, such as phosphorus and nitrogen, which are necessary for biomolecules like DNA or RNA.

A. Presence of Heavy Metals:

Graphene Toxicity: Like Dr. Nagase, Dr. Wagh's team identified graphene and heavy metals in vaccines, raising concerns about the potential toxicity of these materials and their impact on public health.

Machine Translated by Google

Lack of Transparency: These findings are consistent with Dr. Horowitz's accusations about the lack of transparency in the composition of vaccines.

B. Implications for Public Health:

Neurological Disorders: Vaccines have been linked to a number of neurological disorders, including transverse myelitis, neuropathies, and Guillain-Barré syndrome. These effects may be related to the interaction of graphene with nerve cells, causing chronic inflammation and cellular damage.

Immunological Alterations: The integration of HIV genetic sequences into the coronavirus has has been pointed out as a factor that could explain the immunosuppression observed in patients with "long COVID" and the increased risk of lymphatic cancer.

See the dossier on graphene toxicity, which compiles more than 80 studies. Published by: la fifth column, info point, documents section.

6. The Work of the Fifth Column: Independent Investigations

The La Quinta Columna team, led by Ricardo Delgado, has conducted extensive research on the presence of graphene oxide in COVID-19 vaccine vials.
These investigations have been instrumental in documenting irregularities in vaccine composition.

A. Microscopic Analysis by Dr. Pablo Campra

Key Findings: Dr. Pablo Campra, an expert in analytical chemistry, used advanced techniques of Electron microscopy and spectroscopy to identify graphene oxide in vaccine vials.

Microscopic images revealed crystalline structures characteristic of graphene, a highly conductive material that can interact with biological tissues.

This finding is consistent with Dr. Horowitz's claims about the inclusion of graphene in the delivery system of messenger RNA vaccines.

AUDIOESPAI
ivoox
audioKiosco

B. Graphene Toxicity:

Biocorona Effect: Graphene oxide forms a "biomolecular corona" when it comes into contact with blood, which can alter its behavior in the human body. According to cited studies
According to The Fifth Column, ,this crown can trigger inflammatory and thrombogenic responses.

Interaction with 5G Radiation: Graphene is known for its ability to amplify and catalyze electromagnetic energies. When combined with 5G radiation, its toxicity can be exacerbated, causing cellular and systemic damage.

7. Connections between Graphene, 5G Radiation and Public Health Effects:

Research conducted by La Quinta Columna and other experts suggests that graphene and 5G radiation may be interconnected in a synergistic mechanism that affects human health.

A. Mortality in Nursing Homes:

Machine Translated by Google

Study by Ricardo Delgado: According to a study conducted by biostatistician Ricardo Delgado, the 80% of the 5G antennas installed in 2020 were near nursing homes. In many cases, the antennas were located directly on the roofs of these homes, maximizing residents' exposure to electromagnetic radiation.

Synergy between Graphene and 5G Radiation: The combination of graphene and 5G radiation could have acted as a "lethal cocktail" for the elderly, causing a significant increase in mortality.

B. Sudden Deaths in Athletes and Young People:

Documented Cases: Numerous cases of sudden deaths in young athletes have been reported. after receiving the vaccines, possibly due to graphene-induced blood clots.

Infertility in Children and Adolescents: Some studies suggest that vaccine ingredients may be affecting fertility in children and adolescents.

8. The Barbastro Hospital Study: Early Evidence of Harm in Vaccinated Elderly.

The report by Barbastro Hospital reveals a critical finding linking the 2019 flu vaccines to a significant worsening of symptoms in the elderly. This study is particularly relevant because it suggests that graphene and other adjuvants present in the vaccines may have been introduced into the human body long before the alleged "COVID-19" outbreak, paving the way for an exacerbated response when combined with other

factors, such as electromagnetic radiation emitted by 5G antennas installed en masse starting in 2020.

A. Key Findings of the Barbastro Report:

2019 Flu Vaccines: Seniors who received flu shots were at higher risk of developing the virus, according to the report. flu in 2019 showed a significant worsening of their respiratory and immunological symptoms compared to those who were not vaccinated.

Data indicate that 85% of deaths in nursing homes during the first wave of the pandemic had previously been vaccinated against the flu.

This suggests that vaccines may have further weakened the immune systems of older adults, making them more vulnerable to the subsequent impact of other factors, such as graphene and 5G radiation.

Presence of Toxic Adjuvants: The report highlights the use of adjuvants such as polysorbate 80 in influenza vaccines. These adjuvants are known for their ability to increase the permeability of cell membranes, which could facilitate the entry of toxic nanoparticles such as graphene into the bloodstream.

In addition, studies cited in the report indicate that polysorbate 80 can leach compounds Toxicants such as di-(2-ethylhexyl) phthalate (DEHP) from polyvinyl chloride (PVC) medical devices, which could contribute to hepatotoxic effects and other systemic complications.

Machine Translated by Google

B. Vulnerability of the Elderly:

Weakened Immune System: The elderly, whose immune systems are already weakened, They would be particularly vulnerable to the toxic effects of graphene and electromagnetic radiation. This would explain why they were the groups most affected during the pandemic.

Interaction with 5G Radiation: As 5G antennas began to be installed en masse in nursing homes starting in 2020, graphene nanoparticles present in the human body may have interacted with this radiation, exacerbating symptoms and increasing mortality.

C. Geographical Coincidence:

Proximity of 5G Antennas: A study conducted by Ricardo Delgado, founding member of La revealed that Fifth Column , 80% of the 5G antennas installed in 2020 were close to nursing homes. In many cases, the antennas were located directly on the roofs of these homes, maximizing residents' exposure to electromagnetic radiation.

Synergy between Graphene and 5G Radiation: The combination of graphene and 5G radiation could have acted as a "lethal cocktail" for the elderly, causing a significant increase in mortality. This explains why nursing homes were the initial epicenters of the pandemic.

9. Implications of the Barbastro Study:

The Barbastro report not only shows worsening symptoms in elderly people vaccinated against the flu in 2019, but also suggests that the vaccines may have been used as vehicles to introduce graphene and other toxic adjuvants into the human body. This, combined with subsequent exposure to 5G radiation, could have triggered an unprecedented public health crisis.

A. Human Experimentation:

Vaccines and other technologies, such as graphene and 5G networks, may be part of A large-scale human experimentation program. The use of toxic nanoparticles and electromagnetic radiation could be designed to study their effects on the human body and on specific populations.

B. Social Control and Depopulation:

Globalist agendas promoted by figures like Bill Gates and the World Economic Forum (WEF) could be using these technologies to implement programs of social control and population reduction. Graphene and 5G radiation could be tools to weaken the immune system, induce disease, and reduce life expectancy.

10. The Connection with Globalist Agendas and Social Control Projects:

Research conducted so far suggests that advanced technologies used in COVID-19 vaccines, such as graphene and nano-bioelectronics, are not simply medical tools designed to combat a pandemic. On the contrary, these technologies

Machine Translated by Google

could be aligned with broader globalist agendas, promoted by figures and institutions such as the World Economic Forum (WEF), Bill Gates' 2030 Agenda and other initiatives that seek to implement a new model of society based on technological control, mass surveillance and population reduction.

A. The Role of Graphene and Nano-Bioelectronics:

Brain-Machine Interface: Graphene and other bioelectronic nanostructures have the ability to directly interact with biological tissues, including the human brain. This enables their potential use as brain-computer interface (BCI) devices, capable of capturing and transmitting neural signals.

According to patents and scientific studies, these technologies could be used to manipulate the thoughts, emotions and attitudes of people inoculated with vaccines containing graphene.

A clear example is the patent mentioned in the attached document, which describes a system for stimulating the brain using nanomaterials such as graphene, which could allow remote control of brain functions.

Stargate Project and DARPA: As mentioned above, agencies like DARPA have funded projects related to noninvasive neurotechnology, including the ability to hack the human brain using graphene and other advanced technologies. These projects are directly linked to initiatives of social control and mass surveillance.

B. 5G Radiation and its Synergy with Graphene:

Electromagnetic Energy Amplification: Graphene is known for its ability to amplify and catalyze electromagnetic energies. When combined with 5G radiation, its toxicity can be exacerbated, causing cellular and systemic damage.

This synergistic effect between graphene and 5G radiation could explain many of the symptoms reported after vaccination, such as systemic inflammation, neurological disorders, and abnormal coagulation.

In addition, the proximity of 5G antennas to nursing homes and densely populated urban areas populated reinforces the hypothesis that these technologies are being used intentionally to maximize their impact.

C. Inbrain Neuroelectronics and the Myth of "Biocompatible" Graphene:

The Barcelona startup funded by the European Union: One of the most prominent companies Inbrain Neuroelectronics (inbrain, hyphen, neuroelectronics, dot com), led by Carolina Aguilar, is leading the development of graphene-based technology. This company claims to have patented a type of "biocompatible" graphene oxide specifically designed for medical applications such as advanced neurological therapies.

According to its website and promotional materials, Inbrain's goal is to use graphene to develop implantable devices capable of monitoring and modulating brain activity. These devices are presented as revolutionary innovations for the treatment of neurological diseases such as Parkinson's disease and epilepsy.

However, scientific studies contradict the claim that graphene can be Truly "biocompatible." Since graphene has electromagnetic radiation amplification and catalytic properties, its interaction with the human body can increase oxidative stress and cause tissue damage, especially in delicate tissues like the brain.

Machine Translated by Google

James Giordano, a leading expert in neuroscience and biomedical ethics, has warned about the risks of using advanced technologies such as graphene in brain-machine interfaces. In his
In lectures and publications, Giordano has explored how these technologies could be used to create "neuroweapons" capable of manipulating human behavior.

Technological Deception: Despite Inbrain Neuroelectronics' claims, the concept of "biocompatible" graphene appears to be more of a marketing slogan than a scientific reality. Graphene's harmful effects in combination with electromagnetic radiation (such as that emitted by 5G networks) make it impossible to consider it completely safe for human use.

D. The Globalist Agenda of the World Economic Forum (WEF):

The "Great Reset": The WEF has openly promoted the idea of the "Great Reset",
an agenda that seeks to radically transform the global economy and society through the implementation of advanced technologies, the digitalization of everyday life, and the centralization of power in the hands of technocratic elites.

This agenda includes the phasing out of cash, the introduction of coins
central bank digital currencies (CBDC) and the use of mass surveillance technologies to monitor and control the population.

Graphene and bioelectronic technologies could be key tools to implement
This agenda, allowing the creation of a hyper-controlled society where every individual is traceable and manipulable.

Population Reduction: Figures like Bill Gates have spoken openly about the need for
reduce the world's population as part of its efforts to combat climate change and ensure "sustainability." Vaccines and other advanced technologies could be used as tools to covertly implement this population reduction.

Examples include the rise in chronic diseases, cancers, and immune disorders associated with vaccines, as well as the use of technologies such as graphene to weaken the human immune system.

E. Ethical and Social Implications:

Erosion of Individual Freedom: The implementation of advanced technologies such as graphene and 5G radiation raises serious ethical concerns about the erosion of individual freedom and
Privacy. If these technologies can be used to manipulate the human brain and control behavior, then we are facing an unprecedented threat to fundamental human rights.

Distrust in Institutions: The lack of transparency and systematic censorship of independent research have generated a deep distrust in government and corporate institutions. Companies like Inbrain Neuroelectronics, which promote the use of graphene under the guise of "biocompatibility," contribute to this perception of deception and manipulation.

Machine Translated by Google

11. The Technate: The Emergence of a Technified Corporate Government.

The Technate concept describes a system of governance in which tech corporations and oligarchs replace the traditional state, using advanced technology to exert total control over society. This model, championed by figures like Elon Musk, members of the so-called "superclass," represents a new phase of global control and is deeply intertwined with , Peter Thiel and others the technologies we've discussed, such as graphene, nano-bioelectronics, and 5G radiation.

A. The Technate Philosophy:

Technocracy and Centralized Control: According to the ideas promoted by Peter Thiel and Elon Musk, the future of humanity is destined to merge with technology. This process, known as "technoplasticism," seeks to transform human beings into entities susceptible to scientific manipulation.

, one of the key ideologues of the Dark Enlightenment Nick Land , describes this process as where the The integration of humanity into the technosphere allows , processing of genomic information for precise editing and control of the human species. This vision defines what Land calls the bionic horizon: the threshold at which a population becomes indistinguishable from its technology.

In this context, Technate not only implies the replacement of the traditional state by tech corporations, but also the privatization of the "deep state." Companies like Palantir, Anduril, and Clearview AI are forming a new public-private intelligence alliance that allows oligarchs to implement their political agenda without interference from democratic institutions.

B. Connection with Point 10: Globalist Agendas and Social Control Projects.

Technate isn't simply an alternative project to the globalist liberal-financial system led by the WEF; in fact, it shares many similarities with it. Both systems seek to implement total technological control over society, albeit with different actors and narratives:

Globalist-Liberal-Financial Agenda: The World Economic Forum (WEF) openly promotes the idea of the "Great Reset", an agenda that seeks to radically transform the global economy and society through the implementation of advanced technologies, the digitalization of everyday life, and the centralization of power in the hands of technocratic elites.

This agenda includes the phasing out of cash, the introduction of coins central bank digital currencies (CBDC) and the use of mass surveillance technologies to monitor and control the population.

Dark Technate MAGA: On the other hand, the Technate promoted by Trump, Thiel, and Musk presents itself as a nationalist and multipolar alternative to the globalist-liberal-financial system. However, rather than truly opposing advanced technologies, this model seeks to implement them under a corporate-government structure that favors American oligarchs and their allies.

Examples include the use of technologies such as graphene and 5G radiation to create brain-computer interfaces (BCIs) capable of capturing and transmitting neural signals, which could be used to manipulate the thinking, emotions and attitudes of people inoculated with graphene-containing vaccines.

Machine Translated by Google

Stablecoins as an Alternative to CBDCs:

Stablecoins vs. CBDC: One of the key differences between Technate and the globalist system-
The liberal-financial approach lies in the role of digital currencies. While the WEF and BIS actively promote the development of CBDCs (central bank digital currencies) to consolidate state and financial control, Technate supports the use of stablecoins as a private and decentralized alternative.

Stablecoins: These are cryptocurrencies designed to maintain a stable value, generally
pegged 1:1 to the US dollar or other fiat currencies. Leading stablecoins include USDT (Tether), USDC (Circle), and PYUSD (PayPal), all backed by reserves of US dollars, Treasury bonds, and cash equivalents.

Advantages of Stablecoins: Unlike CBDCs, which are directly controlled by
While stablecoins are not restricted by central banks and allow for extreme levels of oversight and programmability, they offer a degree of flexibility and decentralization. This makes them more attractive to Technate proponents, as they can be issued and managed by private players like Tether, Circle, and PayPal, rather than under the exclusive control of government institutions.

CBDC Substitution: Technate's project seeks to use stablecoins as a tool to prevent the implementation of global CBDCs, which are seen as a threat to the "exorbitant privilege" of the US dollar and to US monetary sovereignty. By promoting the use of USD-backed stablecoins, Technate seeks to consolidate the dollar's dominance in the global financial system while keeping control in the hands of tech corporations and private oligarchs.

C. The Oligarchic Network and Technological Control:

Peter Thiel and Elon Musk: These two figures are central to the creation of Technate. Thiel, a
A neo-reactionary accelerationist, he advocates the implementation of advanced technologies to establish a multipolar world order. Musk, for his part, promotes the idea of a corporate government led by himself, like a "TechnoKing" who directs a technological system.

Joint Projects: Thiel and Musk have collaborated on multiple initiatives, such as using Palantir and Starlink to develop artificial intelligence (AI) systems that analyze vast amounts of data and generate automated targets. These technologies are already being used in global conflicts, such as Ukraine, where they serve as a testing ground for future applications.

Monetization of Human Life: Technate also involves the complete monetization of human life.
human life. For example, Musk's proposal to transform his Platform X (formerly Twitter) into a financial services provider reflects his ambition to control half of the global financial system. Moreover, projects like Libra (Diem) seek to create a global asset-backed digital currency, which would allow oligarchs to track and control every economic transaction.

D. Connection with Graphene, Nano-Bioelectronics and 5G:

Brain-Machine Interface: Advanced technologies used in COVID-19 vaccines, such as graphene and nano-bioelectronics, could be key tools for implementing Technate. These technologies enable the creation of brain-computer interfaces (BCIs) capable of capturing and transmitting neural signals. This could be used to manipulate the thinking, emotions, and attitudes of people inoculated with graphene-containing vaccines.

Stargate Project and DARPA: As mentioned above, agencies like DARPA have
funded projects related to non-invasive neurotechnology, including the ability to

Machine Translated by Google

"hacking" the human brain using graphene and other advanced technologies. These projects are directly linked to initiatives of social control and mass surveillance.

Synergy between Graphene and 5G Radiation: Graphene is known for its ability to amplify and catalyze electromagnetic energies. When combined with 5G radiation, its toxicity can be exacerbated, causing cellular and systemic damage. This synergistic effect could be used to maximize the impact of social control technologies on specific populations.

E. Global Implications of Technate:

Multipolar World Order: The Technate is not just a national project, but a global one. Figures like Trump and his administration have expressed their desire to create a multipolar world order, in which the United States leads a system of allied corporate governments. This includes the exploitation of resources in countries like Ukraine, which is presented as a "ripe-for-exploitation nation-state."
after the war.

Resource Exploitation: The Trump administration has highlighted a potential US-Ukraine deal to access rare earth deposits valued at $500 billion. However, this is merely a sideshow to keep the public guessing, while the real goal is to transition Ukraine into a satellite Technate.

United States.

Digital Borders and Smart Walls: Technate also involves the implementation of "digital borders" and "smart walls," which use advanced technologies to monitor and control the movement of people. This is already underway in both the United States and Europe, where projects are being promoted to ensure security through mass surveillance.

F: Their agendas are one thing, and the consent of the population is another. Therefore, the more people wake up, become aware of this broader picture presented in the article, become independent first mentally and then physically from the control system at the level of their community, exercising a conscious and profound sovereignty, the implementation of their agendas will become very difficult for them.

2018 https://pubmed.ncbi.nlm.nih.gov/32254085
«In this review, we will describe the journey of graphene oxide after injection into the bloodstream, from initial interactions with plasma proteins to the formation of the "biomolecular corona" and biodistribution.»

Summary

«Graphene oxide is the hot topic in biomedical and pharmaceutical research of the current decade. However, its complex interactions with human blood components complicate the transition from promising in vitro results to clinical settings. Although graphene oxide is made from the same atoms as our organs, tissues, and cells, its two-dimensional nature causes unique interactions with blood proteins and biological membranes and can lead to serious effects such as thrombogenicity and activation of

immune cells. In this review, we will describe the journey of graphene oxide after injection into the bloodstream, from initial interactions with plasma proteins to the formation of the "biomolecular corona" and biodistribution. We will consider the link between the chemical properties of graphene oxide (and its functionalized/reduced derivatives), protein binding, and the in vivo response. We will also summarize data on biodistribution and toxicity in light of the current understanding of the influence of the biomolecular corona on these processes. Our aim is to shed light on unsolved issues related to the graphene oxide corona to lay the groundwork for the future development of drug delivery technology.

5G and the Elderly: Hospital Complaint:
Nursing Home Deaths and 5G Antennas https://superocho.org/watch/YHkHGFUFRVP4w1L

Video. Dr. Mike Yeadon, former vice president and chief scientist of Pfizer: "I am convinced that More than 100,000 people were killed by the government's midazolam and morphine protocols.

"There is no doubt that the State deliberately administered midazolam and morphine to people with the end of ending their lives."
"None of those medications would be appropriate for a patient breathing with an open airway. Midazolam and morphine suppress breathing."
"The doses used were between 3 and 5 times the recommended dose."
"So I am personally convinced that the excess deaths in nursing homes are substantially explained by this procedure." https://t.me/s/No_plandemia/4699

DARPA's neuromodulation in the US: they will be able to read your mind and write in your brain; it's brain control. mental

Wireless-fidelity (“Wi-Fi”) is harmful due to radio-frequency radiation exposure, pulse-modulated RF carrying data, extremely low frequency (“ELF”) effect on the brain and the Wi-Fi memory effect in body tissues. One of the […]

Dr Giordano: DARPA's N3 “Mind Control” Technology Eliminates The Need For Implants
31-10-24 By Sarah Westall
https://gangstalkingmindcontrolcults.com/dr-giordano-darpas-n3-mind-control-technology-eliminates-the-need-for-implants
Dr Giordano “The need for a reality check is now” – DARPA's N3 “Mind Control” Technology eliminates the need for Implants.
This is the tech that I have been most concerned about. Once the “bad guys” with resources have the capability to manipulate the brain without implants (ie chips, nano sensors, etc.) it becomes very difficult to protect yourself. It also makes it significantly easier for bad actors to implement agendas against governments and institutions. The need to develop solutions to protect ourselves is now.
